

Renewable is never alternative

The business of energy is our playground. Worldwide.

We are your professional partner throughout the entire process: from identifying areas for establishing wind, solar, and hybrid parks, to securing the financial agreements. Finally, we ensure that the project will be a part of our long track record of realized projects.

The project development journey

Project development

A central part of our core business is project development. This is where it all starts. The overall purpose of project development entails everything from identifying areas for establishing wind, solar, and hybrid parks, to securing the financial agreements. We have many years of experience within this area and we will be your professional partner throughout the entire process.

EPC

In Eurowind all projects are constructed by the EPC team. We are responsible for the pre-construction preparation of the projects (permit, legal, stakeholders), engineering and design, procurement of materials and contractors as well as the actual construction of the renewable energy park. After a successful construction, the wind turbines or PV solar plants are prepared for grid connection and commissioned.

Asset management

The Asset Management organisation at Eurowind Energy A/S handles each wind or solar park daily within the areas of Technical Asset Management, Commercial Asset Management, and Investor Administration. We're insuring the optimal output of the parks. We operate a portfolio of parks owned by Eurowind Energy A/S, and a numerous of parks owned by our customers.

“We identify opportunities. Then we seize them.”

About Eurowind Energy

- Established in 2006
- Eurowind Energy is the leading Danish developer, owner and operator of solar and wind energy projects
- Norlys a.m.b.a. and Eurowind Energy have joined forces to establish a new company – Norlys Energy Trading A/S
- Since October 2021, we have said hello to more than 100 people
